

Puppy Care Instructions:

>1. First Day with Puppy Pick Up: Please Bring: snuggle blanket, water, paper towels. For long trips (4 hrs. or more bring: canned chicken pedigree puppy. We pre-treat puppy w/ NuVet vitamins or similar as a "Food replacement" so you don't have to worry if puppy ate or not. But this is only good for 3-4 hrs. Give pup the canned chicken pedigree/along w/ water for trip home. Puppy should go to stress free atmosphere. Avoid Stressful situations such as: chills, being overheated, over-tired, parties, shopping, overplay, parties, ballgames...no more stress. Just TLC. Puppy has enough stress with travel and learning new home environment. Also, do start Your Pet On the path to perfect health with "NuVet Plus". This is a one-a-day maintenance powder. We will give you a free sample that is mixed w/ dry kibble puppy food. Another, vitamin supplement for special stressful days where puppy's meals are compromised such as day @ vet, groomer, travel, all day @ lake...please use Nutri-cal or Nutri-drops. This will replace a meal and keep puppy on track.

>2. Puppy Proof a safe secure warm fenced-in area where Puppy can observe you all and will live for several months. Yes, we do mean several months. Sorry. You'll have a better behaved puppy for life. This small area helps puppy w/ many positive behaviors such as housebreaking for one. Sorry-No swiffer floor mops. The cleaning solution used can kill a pup. Keep puppy confined- No Freedom- Basic Set up or something similar-can use small room, hallway...But puppy needs to "See You". The idea is that for tiny breed dogs one has to be more attentive in the beginning. They leave little mess's and can go unnoticed except by them. And, most housebreaking methods are for larger size dogs who must be trained to outside asap. But, the smaller breeds cannot tolerate cold air as much. They need a inside newspaper to start out on first. Being little, with too much space-they can get distracted and have too many opportunities to get mark their territory. Confinement is best for consistent training w/ rewards/punishment.

A pet taxi or similar is needed for The "bed Den" . This should be filled w/blanket/toys/treat dish. Then, separate this bedding/play/food area from the open newspaper tray. Suggestion for food/water containers easy to use are used Old cheese crocks w/ clips (found @ goodwill type stores). These can be clipped right on door. Great for travel too. Finally, Enclose everything w/ a fencing. We get fencing, tray, saphook @ local hardware store such as Fleetfarm. They carry a nice green coated inexpensive fencing for approx. 14. Or some purchase a "X pen" . Puppy can come out to play, socialize...But, puppy must be put back when not supervised in his/hers pen area. Example shown below.

>3. Reward & Punishment Methods need to be decided and applied. Suggestion: We use hot dogs for housebreaking reward only. Puppies LOVE hotdogs. Punishment is a empty soda can w/ pennies in it- ducked taped to long stick. The rattle noise, light taps on rump or floor, and your vocal command "No" send a clear message. Keep another penny/can in car.

>4. Use Safe toys such as: Rawhide chips/nyla bone /kongs. The soft terry cloth or fuzzy cotton fill Toys caused 2 accidents that lead to surgery. If you use them-only use supervised. Remove toy altogether when done playing. Never give hoof, pig ears...they splinter in stomach.

>5. Put out Food ASAP. 🍲 ***Main Food Dish:** Needs to be a Dry Kibble to be left out all the time. Puppy comes with "purina puppy chow' Mixed the puppy vitamins> NuVet). You can current kibble with your new food > 50/50 if you like. But, its normally better to let puppy adjust first before mixing. Perhaps in a few wks would be good.

🍲 ***One-a-day snack:** Very modest tiny scoops of any 1-2 listed foods here: diced apple, carrots, beets, celery, low acidic fruits, lettuce, squash. Plain Cereals: honey oats cherrio's/chex, cottage cheese or 2-3 bits of very tiny piece's of cheese, 1/4 hard boiled a egg daily, moisten dry kibble w/ chick broth/soup, cooked meat such as ground turkey, chicken/beef livers, fish, cottage ch. Yogurt plain, apple sauce, ...cooked -boiled - Strain meat: no fat, pork, or raisens.

Puppy must eat every 4 hrs. If puppy doesnt eat puppy could go into Hypoglycemia and die. You must get puppy to eat. Here are some suggestions: Serve Moistened food. Pour boiling hot water deluted w/ pinch of chicken stock-Over dry kibble food just covering to the top. Seal in air tight container. Let sit for 15-20 min. Give fresh daily at room temperature. they prefer warmed up food not hot. >If puppy still gives you a hard time eating -please offer hot chicken broth over the dry kibble. Let Soak 15 min. or so. Serve warm. You can add Baby Rice or Oatmeal Cereal.

>**If puppy still doesnt eat...** You must syringe feed puppy asap. Purchase large syringe from Pharmacy. Syringe feed a mixture of: Baby Rice cereal, diluted chicken broth, one egg white, baby food jar chicken/beef n gravy type, a little sour cream. Puppies have to eat at least 15cc.per 2 lbs.

>**6. Put out Water ASAP.** NO Calgon or treated water-this can kill a hamster in a months time from calcium/salt deposits. Use A. unflavored pedialyte or B. 2 Tbs.spoon Karo syrup per one gal.distilled water. *if puppy isnt drinking water-you may need to syringe water into mouth. Regular tap water is ok. Or well water. Only treated salt water is not good.

>**7. You need two different types of vitamins for two different reasons.** One is for a everyday maintenance called: NuVet. 1/4 tsp.1x daily in powder form that is sprinkled over foods. The other is only Used for stressful days. Called: Nutri-cal or Nutri drops. This is a molasses type paste that puppies love. It'll sustain them for several hrs. Details below.

Where do I get the rest of this stuff?
